2nd VLB Symposium on Acidic Fermented Non-Alcoholic Beverages (SAFB) 25th to 27th May 2021 (VLB Virtual Campus)

**VLB
BERLIN**

The ongoing social nutrition trends, current market forecasts and activities in the beverage industry were reflected at the first symposium on fermented non-alcoholic beverages 2019 in Berlin. In a broad and exciting lecture program, the participants from industry, research and food monitoring presented and discussed various aspects of the manufacture, functionality, sales and regulatory framework conditions of corresponding products. Subsequent to this very successful and inspiring exchange, and after a pandemic-related recess in 2020, the second round is finally going on. We are very pleased to make the event accessible to a broader audience through the established VLB Virtual Campus.

*Impressions of our 1st International
Brewing Web Conference*

The Research Institute for Biotechnology and Water as part of Versuchs- und Lehranstalt für Brauerei in Berlin (VLB) has many years of experience in the field of beverage development based on mixed cultures as well as in the development and provision of corresponding starter cultures.

As part of the symposium, the current state of the art will be considered. The associated innovation potentials and challenges from the different perspectives of research institutions, SMEs and the manufacturing and supplying industry will also be subject of discussion at the symposium.
